Rates Effective April 17, 2026

Company	Product	Rate Banding	Indices Offered	Crediting Frequency	Indexing Method	Buffer Modifier	Current Buffer Rate(s)	Current Participation Rate(s)	Current Cap Rate(s)	Current Spread Rate(s)	Fee for Indexing Method	Guaranteed Buffer Rate / Participation / Cap / Spread	Performance Triggered Declared Rate
		<p>"Annual Lock" strategies perform an annual point-to-point measurement, subject to a participation rate, cap, and buffer. The annual cap rate is guaranteed for the six-year term. A running total is kept each year, but the interest is not credited to the Account Value until the end of a six-year term. Withdrawals from the Annual Lock structured strategies cause a recalculation of each previous Annual Lock anniversary's starting and ending amounts.</p> <p>Dual Performance Annual Point-to-Point and Dual Performance Term End Point structured strategies credit a positive amount on negative index performance, subject to a decline in the index up to the buffer percentage, as well as crediting interest based upon any positive index performance, subject to the cap rate. Negative index performance beyond the buffer will be absorbed by the annuity purchaser. For example, if the buffer is 10% and the market declines 5.00%, the purchaser will receive a positive credit of 5.00% or if the market declines 11.00%, the purchaser will experience a loss of 1.00%. Note: it is possible to receive a greater return on a negative performance, if the Buffer percentage is greater than the Cap Rate.</p> <p>Dual Performance Triggered structured strategy credits a positive amount on any negative index performance, subject to the buffer percentage as well as crediting interest based upon any positive index performance, subject to the Dual Performance Triggered rate. Negative performance beyond the buffer percentage is absorbed by the annuity purchaser. For example, if the buffer is 10.00% and the Dual Performance Triggered Rate is 5.00%, if the index declines 6.00%, the purchaser will receive a positive credit of 5.00%. If the index declines 11.00%, the purchaser will experience a loss of 1.00%</p> <p>"Loss Limiter" Buffer Modifier structured strategies provide protection up to the Buffer Rate and then after the "Loss Limiter" percentage. The annual term "Loss Limiter" percentage will never be less than 90% and the six-year term will never be less than 95%. "Loss Limiter" Buffer Modifier ensures a maximum of 5% or 10% loss, if the strategy is held until the end of the term. The "Loss Limiter" does not apply if there are withdrawals, transfers out of the structured strategy, a death claim or upon annuitization. Example: If the annual Buffer Modifier is 10%, the "Loss Limiter" percentage is 90% (90%-1=10% maximum loss). If the index performance is -25%, the client is protected from the first 10% of negative performance due to the Buffer Modifier, they will lose 10% of the Account Value based on the next 10% of negative performance and will be protected from the last 5% of negative performance due to the 90% "Loss Limiter."</p> <p>Performance Triggered structured strategy credits company-declared rate if growth of index is zero or positive.</p> <p>If a six-year term extends beyond the maximum annuity date, a one-year structured strategy becomes available (not listed in rate table above).</p> <p>The first Comparative Annual Point-to-Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 125%, which is then subject to a cap (minimum 2%).</p> <p>The second and third Comparative Term End Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 110%, which is then subject to a cap (minimum 12%).</p> <p>The third and fourth Comparative Term End Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 125%, which is then subject to a cap (minimum 12%).</p> <p>i.e. If the cap is 50% and the index's growth is +35%, the lesser of the following will be credited to the annuity: +50% OR [(+35% * 125%) = +43.75%], which results in the annuity being</p>

# Return of Premium Death Benefit Rider

Guaranteed Minimum Death Benefit

<b>Company</b>	<b>Equitable Financial Life Insurance Company of America</b>
<b>Benefit Name</b>	<b>Return of Premium Death Benefit Rider</b>
<b>Guaranteed Minimum Death Benefit</b>	<p>Optional Return of Premium (ROP) Death Benefit Rider provides:</p> <p style="text-align: center;"><b>Greater of:</b> Full Account Value</p> <p style="text-align: center;"><b>OR</b></p> <p style="text-align: center;">Premiums Paid, less a Pro Rata adjustment for withdrawals</p> <p>Rider must be elected at issue. A deduction to the rider is made for the portion of the benefit charge that is attributed to a withdrawal. Benefit charge is assessed daily for the variable subaccounts and assessed at the end of the crediting term for the structured strategies.</p> <p>If the ROP Death Benefit Rider is elected, the daily Account Value will reflect a pro-rated charge for the rider based on the number of days elapsed in the structured strategy term.</p> <p>If there is an owner change, the ROP Death Benefit Rider remains based on the life of the original owner. If the new owner dies before the original owner, the death benefit is equal to the Account Value. A joint owner can be removed for a divorce without impacting the death benefit.</p>
<b>Benefit Close Date</b>	N/A
