Rates Effective April 17, 2026

Company	Product	Rate Banding	Indices Offered	Crediting Frequency	Indexing Method	Buffer Modifier	Current Buffer Rate(s)	Current Participation Rate(s)	Current Cap Rate(s)	Current Spread Rate(s)	Fee for Indexing Method	Guaranteed Buffer Rate / Participation / Cap / Spread	Performance Triggered Declared Rate
		<p>"Annual Lock" strategies perform an annual point-to-point measurement, subject to a participation rate, cap, and buffer. The annual cap rate is guaranteed for the six-year term. A running total is kept each year, but the interest is not credited to the Account Value until the end of a six-year term. Withdrawals from the Annual Lock structured strategies cause a recalculation of each previous Annual Lock anniversary's starting and ending amounts.</p> <p>Dual Performance Annual Point-to-Point and Dual Performance Term End Point structured strategies credit a positive amount on negative index performance, subject to a decline in the index up to the buffer percentage, as well as crediting interest based upon any positive index performance, subject to the cap rate. Negative index performance beyond the buffer will be absorbed by the annuity purchaser. For example, if the buffer is 10% and the market declines 5.00%, the purchaser will receive a positive credit of 5.00% or if the market declines 11.00%, the purchaser will experience a loss of 1.00%. Note: it is possible to receive a greater return on a negative performance, if the Buffer percentage is greater than the Cap Rate.</p> <p>Dual Performance Triggered structured strategy credits a positive amount on any negative index performance, subject to the buffer percentage as well as crediting interest based upon any positive index performance, subject to the Dual Performance Triggered rate. Negative performance beyond the buffer percentage is absorbed by the annuity purchaser. For example, if the buffer is 10.00% and the Dual Performance Triggered Rate is 5.00%, if the index declines 6.00%, the purchaser will receive a positive credit of 5.00%. If the index declines 11.00%, the purchaser will experience a loss of 1.00%</p> <p>Performance Triggered structured strategy credits company-declared rate if growth of index is zero or positive.</p> <p>If a six-year term extends beyond the maximum annuity date, a one-year structured strategy becomes available (not listed in rate table above).</p> <p>The first and second Comparative Term End Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 110%, which is then subject to a cap (minimum 12%).</p> <p>The third and fourth Comparative Term End Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 125%, which is then subject to a cap (minimum 12%).</p> <p>i.e. If the cap is 50% and the index's growth is +35%, the lesser of the following will be credited to the annuity: +50% OR [(+35% * 125%) = +43.75%], which results in the annuity being credited with the lesser value of +43.75%.</p> <p>The cap rates and multiplier factor are subject to change each six-year period, subject to contract minimums.</p> <p>All premiums are held in the Money Market Account prior to being allocated to the structured strategies.</p> <p>Transfers between structured strategies can occur at any time and will be invested in the new strategy on the next segment start date. A maximum of 136 structured strategies permitted at any one time.</p> <p>A daily adjustment is used to determine a daily Account Value, which is used for calculating the Death Benefit amount and the amount of any withdrawal. The daily adjustment is equal</p>
