<b>Company</b>	<b>Equitable Financial Life Insurance Company of America</b> Equitable Holdings Inc.
<b>Product</b>	<b>Investment Edge<sup>®</sup> 21 Select Variable Annuity</b> (FPDA)
<b>Other</b>	<p>M&amp;E Charge is assessed against a structured strategy at the end of the term, when a withdrawal or transfer is taken or when the Death Benefit is paid or policy is annuitized.</p> <p>Breakpoint Credit" of up to 0.15% annually is calculated quarterly but applied to the Account Value annually. A 0.10% "Breakpoint Credit" is only applied when the quarterly anniversary and the annual anniversary have an Account Value of \$500,000 or more, or 0.15% when \$1,000,000 or more.</p> <p>No ownership changes are allowed for Inherited NQ contracts. For single owner contracts, or joint owner NQ contracts if the oldest owner dies, and the Return of Premium Death Benefit is elected the Account Value is reset with any applicable Death Benefit. For jointly owned NQ contracts, if the youngest owner dies first no Death Benefit is paid and the contract continues as is.</p>
<b>State Approvals</b>	<p><b>Variations Approved In:</b> CA, DC, FL, ID, LA, MD, ME, NJ, NM, RI, SD, TX</p> <p><b>States Not Approved In:</b> NY, OR, UT</p>
<b>Street Level Compensation</b>	<b>To be determined by Broker Dealer</b>
<b>Data thought to be current as of:</b>	5/1/2026

\* The Total Annual Expense excludes any rider charges. Please refer to the Rider specs for any charges that may apply in addition to the annuity contract charges.

Rates Effective April 17, 2026

Company	Product	Rate Banding	Indices Offered	Crediting Frequency	Indexing Method	Buffer Modifier	Current Buffer Rate(s)	Current Participation Rate(s)	Current Cap Rate(s)	Current Spread Rate(s)	Fee for Indexing Method	Guaranteed Buffer Rate / Participation / Cap / Spread	Performance Triggered Declared Rate
		<p>Dual Performance Annual Point-to-Point and Dual Performance Term End Point structured strategies credit a positive amount on negative index performance, subject to a decline in the index up to the buffer percentage, as well as crediting interest based upon any positive index performance, subject to the cap rate. Negative index performance beyond the buffer will be absorbed by the annuity purchaser. For example, if the buffer is 10% and the market declines 5.00%, the purchaser will receive a positive credit of 5.00% or if the market declines 11.00%, the purchaser will experience a loss of 1.00%. Note: it is possible to receive a greater return on a negative performance, if the Buffer percentage is greater than the Cap Rate.</p> <p>Dual Performance Triggered with Buffer structured strategy credits a positive amount on any negative index performance, subject to the buffer percentage as well as crediting interest based upon any positive index performance, subject to the Performance Triggered rate. Negative performance beyond the buffer percentage is absorbed by the annuity purchaser. For example, if the buffer is 10.00% and the Performance Triggered Rate is 5.00%, if the index declines 6.00%, the purchaser will receive a positive credit of 5.00%. If the index declines 11.00%, the purchaser will experience a loss of 1.00%</p> <p>The first Comparative Annual Point-to-Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 115%. The multiplying factor will never be less than 105%.</p> <p>The first Comparative Term End Point indexing method uses a point-to-point calculation of indexed interest and credit the index's performance multiplied by a factor of 130%. The multiplying factor will never be less than 105%.</p> <p>Performance Triggered structured strategy credits company-declared rate if growth of index is zero or positive.</p> <p>Withdrawals reduce a structured strategy's daily value dollar-for-dollar.</p> <p>All premiums or DCA transfers are held in the Money Market Account prior to being allocated to the structured strategies.</p> <p>Maximum of 160 structured strategies permitted at any one time.</p> <p>A daily adjustment is used to determine a daily Account Value, which is used for calculating the Death Benefit amount and the amount of any withdrawal. The daily adjustment is equal to the lesser of:</p> <ol style="list-style-type: none"> <li>1. Fair value of the fixed instruments; plus</li> <li>2. Fair value of the hypothetical derivatives; plus</li> <li>3. The cap calculation factor, which represents a return of a portion of the estimated expenses for the year.</li> </ol> <p>A pro rata portion of the M&amp;E Charge is included in the daily Account Value calculation.</p>
